Krone at Nufam 2021

Trade fair debut for the new Profi Liner generation Werlte, August 2021. "NUFAM 2021 is the first major industry meeting point this year. We are very much looking forward to meeting our customers in person - it's finally getting restarted," says Dr Frank Albers, Krone Managing Director Sales and Marketing, in the run-up to the commercial vehicle trade fair in Karlsruhe. From 30 September to 3 October, Krone will be on site with its show trailer at Stand D 103 in Hall 1. The new generation Profi Liner can be seen live at a trade fair for the first time. The most important highlights are the flexible modular solutions for individual requirements, the numerous pre-galvanised components, the robust construction with a tare weight of less than 6 tonnes as well as the once again reduced operating forces when handling the sliding curtain and rear portal. The exhibit in the inner courtyard of the exhibition grounds also has various load securing solutions on board. The Krone team provides the latest information on the entire product range on site, for example on the Cool Liner refrigerated vehicle with Krone Telematics equipment as standard, which was issued in a special edition for the 25th anniversary. Those in the booming container business will be interested in the new Box Liner eLTU 40 Light Traction, which is suitable for all sizes from 20' to 45' with its particularly light all-round container chassis. Other topics include the Europe-wide service initiative "Krone 360° Trailer Service", the manufacturer-independent telematics platform "Krone Telematics" and the in-house "Tyre Pressure Monitoring System" (TPMS). From 2022, tyre pressure monitoring systems will be required by law and will be fitted as standard on vehicles.
