KRONE TELEMATICS PORTAL: THE ALL-IN-ONE SOLUTION FOR LOGISTIC

The all-in-one solution for logistics

In order to bundle data from a wide variety of telematics systems on a single interface, Krone utilises a flexible data structure and an optimised, clear display. No matter what vehicle type, vehicle manufacturer or telematics box is installed, the Krone Telematics Portal prepares the data according to the customer's requirements. It supplies neutral, standardised data that is precisely tailored to the customer's needs. The data of all vehicles appears in an identical format, so that standardised alarms, workflows and reports are easily possible across a variety of data sources.

Krone Telematics Portal: complete control, all the time

The Krone Telematics Portal is distinguished by its intuitive usability, thanks to icons, colours and information that is immediately visible. It also guides each user through the comprehensive functions in a clear and comprehensible manner. The versatile setting options range from assigning rights to users through to live alarms at the vehicle level or for vehicle groups through to customisable reports and customer-specific extensions.

Users can easily determine the current status of their vehicles and units at first glance. This data includes the position, the current temperature in the freight compartment, the door status, the coupling status of the tractor unit, tyre pressures or even indications from the brake system and the refrigeration unit. This keeps users up to date on whether their transports are running smoothly or whether preventive action is necessary. The Krone Telematics Portal's web-based interface makes it available immediately and from anywhere, without any installations.

The Krone Push API

This flexible software architecture is continuously expanded, according to customer demands. The Krone Push API supplies the desired data to any other provider to do this. This allows users to access the data where they need it and avoids isolated solutions. This saves time and resources, which the customers can devote to their actual goal: ensuring perfect transportation.

Krone Telematics App: ready for use anywhere

The Krone Telematics App for iOS and Android increases Krone's ability to monitor and control vehicles from everywhere. The app reports alarms through push notifications, makes it possible to control the refrigeration unit and even enables access control for vehicles equipped with the Krone Door Protect system.

To ensure data security and availability at all times, specialists work around the clock in Krone's dedicated data centre, continuously maintaining standards at the highest level available.

Visit us at the Krone trade fair stand!

IAA Transportation 2022 | 20/09/2022 –25/09/2022 |

Hanover Fair | Hall 27 | Stand C40 | outdoor area N41, Q41, P43
