KRONE TELEMATICS PORTAL: OPEN INTERFACES AND SELF-SERVICE

Krone Telematics Portal

Easy and transparent data management – open interfaces and self-service

Krone Telematics will be setting new standards and services at the IAA Transportation 2022, underscoring its strategy of making telematics data available wherever the customer needs it. For some time now, Krone has been employing a standard push interface that is open and backwards compatible for all partners. More than 250 outgoing interfaces are currently running, and the volume of requests is significantly increasing.

With the new "self-service" function, simple and transparent data transmission to all connected systems is even more convenient. This is how Krone Telematics customers can both exchange data with each other as well as with third-party service providers or customer-specific applications with just a few clicks. The customer has full transparency to decide which vehicles they want to release data for, over a defined period of time. The customer has full control with just a few clicks, by simply selecting and deselecting vehicles and the desired data packages, ranging from GPS through to EBS and temperature data. The transparency report, which is automatically generated, prevents accidental data leaks and misuse of the customer's telematics data.
