## New Partnership for Seamless Telematics Data Exchange

Two leading providers in the field of telematics, the KRONE Commercial Vehicle Group and TIS GmbH, have entered into an innovative partnership designed to simplify the exchange of telematics data for their customers. The aim of this collaboration is to further drive digitalization in the logistics industry and enable fleet operators to use their data even more efficiently.

The partnership allows telematics data from KRONE vehicles and trailers to be seamlessly integrated with the TISLOG telematics software from TIS. Customers benefit from a unified data overview that consolidates all relevant information, such as location, vehicle status, temperature readings, and freight parameters, into a single system. This centralized approach not only enhances transparency but also reduces the effort required to manage multiple systems.

“With TIS, we have a strong partner at our side to support our customers in digitizing their logistics processes,” says Maximilian Birle, Head of KRONE Telematics. “Through this partnership, we are laying the foundation for straightforward integration of vehicle and trailer data, helping our customers manage their fleets more efficiently.”

The solution is particularly user-friendly, as customers can independently configure the data transfer within their respective systems. Fabian Bielefeld, Managing Director of TIS GmbH, sees great potential in the collaboration: “The partnership with KRONE is an important step towards providing our customers with a comprehensive view of their fleets. This integration saves time, simplifies processes, and enables more targeted use of resources.”

The linkage of telematics data from KRONE and TIS offers clear advantages. Companies gain real-time insight into their fleets, enabling better planning and monitoring of transport operations while benefiting from a higher degree of automation. These efficiency gains are crucial to meeting the demands of modern supply chains.

With this partnership, KRONE and TIS once again demonstrate that the future of logistics lies in digital connectivity. By focusing on innovation and customer orientation, the two companies are setting new standards for transparency and efficiency in the industry.
