

Trailer Dynamics at transport logistic 2025

Werlte, May 2025 – Trailer Dynamics will be exhibiting at this year's transport logistic 2025 with its own stand – bringing not just innovative technology, but above all tangible solutions for decarbonisation and efficiency gains. The focus lies on engaging with customers and visitors to explore optimal usage scenarios for the electrified eTrailer, supported by the digital Trailer Dynamics simulation model.

The message is clear: the eTrailer is no longer a promise for the future – it's a reality. Orders can now be placed. Production of the first units, scheduled for delivery in autumn 2025, has already begun.

"Our goal at the trade fair is to work together with our partners, customers, and visitors to develop tailored use cases for the eTrailer and discuss its benefits. Our digital simulation model enables precise analysis of savings potential and operational integration – customised to each fleet," says the Trailer Dynamics team.

The eTrailer features an independent electric drive unit within the trailer – a technological innovation that not only significantly reduces CO₂ emissions but also boosts the efficiency and range of existing tractor units.

Visit us at transport logistic 2025 and experience today what the decarbonised, efficient future of freight transport already feels like.
